The Honorable John D. Rockefeller
Chairman Senate Commerce, Science, and Transportation Committee
United States Senate
531 Hart Office Building
Washington, DC 20510

The Honorable John Thune
Ranking Member, Senate Commerce, Science, and Transportation Committee
United States Senate
511 Dirksen Senate Office Building
Washington, DC 20510

Re: Commerce, Science and Transportation Committee "Cybersecurity Legislation"

Dear Chairman Rockefeller and Ranking Member Thune:

On behalf of Good Technology and our global workforce, we are pleased to offer our support regarding the Rockefeller-Thune draft cybersecurity legislation that was recently circulated on July 10, 2013, by the Senate Commerce, Science, and Transportation Committee. Good Technology believes that the proposed legislation will help ensure a stronger public-private collaboration process now and in the future as the cyber security needs of the nation continue to evolve. We support your efforts to ensure that the federal government supports cutting edge research, such as mobility which continues to evolve, as well as your efforts to increase public awareness, and the need to improve the skillset of our workforce to better address cyber threats. Good Technology is the innovation leader in secure mobility solutions enabling businesses and government to move freely as the mobility sector continues to rapidly evolve. We applaud your leadership and work to advance bipartisan cybersecurity legislation.

Good Technology's comprehensive solution consists of a secure mobile platform, a suite of collaboration applications, and a broad third-party application and partner ecosystem that unlocks your mobile potential. More than 5,000 organizations in 130 countries use Good Technology solutions, including FORTUNE 100 leaders in commercial banking, insurance, healthcare, retail, government, and aerospace and defense. Learn more at www.good.com.

Good Technology is working collaboratively with US federal government agencies, state and local governments, and education institutions to develop and deploy mobile solutions that balance the needs of IT managers for security and regulatory compliance with those of decision-makers and mobile-users, given the need for rapid, cost-efficient, and easy adoption of mobile solutions that meet our cybersecurity needs. Mobility is impacting every aspect of IT from operating systems, platforms, applications, compliance and security, deployment, and end-users. As a result, Good provides a cost effective and secure solution that allows enterprise decision-makers to manage and secure information and applications on mobile devices selected and used by their user-clients.

Good is working closely with standard setting organizations here in the US and around the globe including the National Institute of Standards and Technology (NIST) to establish workable guidelines around mobile security as they work to compose the standards framework on cybersecurity. We are very supportive of NIST's Special Publication 800-124 Revision 1 that was released in June 2013 entitled, ***"Guidelines for Managing the Security of Mobile Devices in the Enterprise."*** We believe these guidelines fit nicely within the scope and purpose of Title 1 of your proposed legislation. Additionally, Good Technology commends the provisions of the legislation to strengthen the country's cyber research and development, especially across academic and research institutions, as well as the focus to enhance workforce preparedness and the need to increase public awareness of cyber threats.

We believe that these provisions will ensure that the federal government is in a stronger position to protect our cybersecurity while at the same time ensuring that grater collaboration takes place across industry to develop a set of voluntary standards and best practices that will reduce cyber risks to our critical infrastructure. For these reasons, Good Technology supports your legislation and encourages the Senate Commerce, Science, and Transportation Committee to adopt the proposed cybersecurity legislation. Please do not hesitate to call on Good Technology, if we can be of further assistance and helpful in moving forward the proposed legislation.

Sincerely,

Christy Wyatt
President and Chief Executive Officer
Good Technology
